

John Emmanuel Galang

Software Developer

Louisville, KY ▪ johngalang.dev@gmail.com ▪ [LinkedIn](#) ▪ [GitHub](#) ▪ [Portfolio](#)

Results-driven Full-stack Software Developer with **3+ years of experience** specializing in **TypeScript** and modern web technologies. Proven track record in spearheading projects, implementing new features, and optimizing software for efficiency.

Highlights of Expertise

- React, Angular
- Bootstrap, Tailwind, Material UI
- Unit Tests, E2E Tests
- Node, Express
- MongoDB, PostgreSQL, Prisma
- Git, GitHub, Jira, Confluence, Figma

Career Experience

Software Developer - September 2022 – Present

SuiteSpot Inc. (TypeScript, Ionic, Angular, Express, MongoDB, Jest)

- Consistently met sprint goals by completing a wide range of tasks, including implementing entirely new features, extending existing capabilities, and resolving software defects.
- Gained expertise in efficient debugging techniques, effectively identifying, and resolving issues to ensure the stability and reliability of the software.
- Participated in code reviews with developer team and gained feedback from senior developers and experience in writing custom, scalable code.

Node JS Developer - November 2021 - August 2022

2Dam Creative (TypeScript, Node, Express, MongoDB)

- Initiated the development team to use linters and formatters for more clear and uniform code reviews.
- Enforced strict TypeScript usage, minimizing "any" types for enhanced code quality.
- Spearheaded the team's confluence for writing documentation for internal use such as onboarding developers, git processes and workflows, and miscellaneous articles.
- Tested software for bugs and operating speed, and documenting processes to increase efficiency.

React Developer - June 2021 - October 2021

10x Ventures (TypeScript, Next JS, Node, Prisma, PostgreSQL)

- Developed a web application using Twitter API to help SaaS start-ups, ecommerce stores, coaches, and marketers to get leads and have their first customers/users.
- Worked with an agile scrum team, contributing 100% continuous improvement and development (CI/CD), helped prioritize scope feature requests to ensure that the biggest impact features were worked on first.
- Developed new features to our application that uses Twitter API such as bulk messaging and bulk adding of leads as requested features from user feedbacks.

Full Stack Developer - October 2020 – May 2021

GameMyBiz (React, Node, Express, MongoDB, Storybook)

- Developed a full-stack web application where companies can have their KPI's gamified by integrating points and gameboards for a more enjoyable work for their employees.
- Transformed front-end from vanilla JavaScript to React.
- Oversaw a team of 3 software engineers to write scalable code for our developing SaaS product.
- Built and maintained 100% back-end REST services using Node that served data to our React front-end.

Education

University of the Philippines Los Baños, 2015-2019

Bachelor of Science degree
